# PROTECT YOUR INVESTMENT

## Protect Your Investment

Get the most out of your new Generac® residential standby generator when you add the GenPad™ from DiversiTech.

## Protect Your Generator

The GenPad provides a sturdy, permanent base for your Generac® generator that won't shift or degrade over time. Each GenPad is made from a composite of high strength fibers and cement and is warranted for the life of the generator. Enjoy the comfort of knowing your generator is protected and stable on the new GenPad. GenPads have been designed exclusively for Generac® generators. Your generator will mount securely to the GenPad using bolts and the inserts built into the pad. This helps to keep your generator centered on the pad and prevents damage from shifting or moving.

## Improved Appearance

Each GenPad gives a finished look to your generator installation and is contoured to match the exact dimensions of your unit. This makes for an attractive installation that will last for the life of your generator.

## Installs Faster

GenPad installations are faster and cleaner than pouring a concrete pad so you don't have to worry about messy concrete or waiting for it to dry and cure before installing your generator. GenPad installations are also more stable than simply using gravel, eliminating the need to hire someone to re-level the generator as time passes. GenPads are available in two models to meet the needs of any area.

Standard GenPads are ideal for most residential applications. GenPad Hurricane pads are an even thicker, heavier pad designed for storm prone areas including south Florida and the Gulf Coast.

- Extremely Impact and Breakage Resistant
- Fiber reinforced concrete with rebar for extra support
- Flat bottom to facilitate easy leveling of the pad and generator
- Virtually eliminates sinking of the unit into the ground
- No maintenance
- Warranted for the life of the generator
